presto admin 安装

```
pip2.7 install --upgrade pip
pip2.7 install virtualenv
pip2.7 install virtualenvwrapper
```

.bashrc 修改，在最后面加了下面两句话

```
vim  ~/.bashrc
export WORKON_HOME=~/.environments
source /usr/bin/virtualenvwrapper.sh
```

重新加载.bashrc文件了

```
source ~/.bashrc
```

Requirements

1. Python 2.6 or 2.7
2. Docker. (Only required for development, if you want to run the system tests)

Building

1. Clone your fork locally ::

```
$ git clone git@github.com:prestodb/presto-admin.git
```

2. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development ::

```
$ mkvirtualenv prestoadmin
$ cd prestoadmin/
$ python setup.py develop
```

3. Create a branch for local development ::

```
$ git checkout -b name-of-your-bugfix-or-feature
```
