## 7 清算表

BAOFOO\_CM.cm\_deal payer\_acct\_code关联不到merchant\_id payer\_subject\_acct\_code, payee\_subject\_acct\_code 这两个字段2012 开头的是 资金托管账户

cm\_deal 与cm\_fi\_deal的区别:

baofoo\_cm.cm\_deal与baofoo\_cm\_v2.cm\_deal是清算交易的基础表,包含所有收单、代付业务数据; baofoo\_cm.cm\_fi\_deal仅包含收单业务数据(不含跨境数据),对应的deal\_code: select deal code from BAOFOO CM.cm conf fi deal;

对于特殊的业务场景: 混合支付(deal\_code 320),一笔混合支付交易金额100元,其中有20是从商户的营销账户扣钱,另外80才是真实的收单交易。cm\_deal表记录的交易金额为100,cm\_fi\_deal仅统计收单交易金额80(与交易表金额一致)

#### 例:

select deal\_amount from baofoo\_cm\_v2.cm\_deal WHERE pk\_day>='2018-11-25' and order id=2759860368;

 $select \quad succ\_money \quad from \quad baofoo\_cm.\ cm\_fi\_deal \quad WHERE \quad pk\_day>='2018-11-25' \quad and \\ order\_id=2759860368;$ 

select succ\_money from baofoo\_fi.fi\_gw\_express\_order WHERE pk\_day>='2018-11-25' and order\_id=2759860368;
