## hdfs 批量修改文件夹名称

```
#hdfs 批量修改文件夹名称

array=(biz_microsite_grabmobile biz_microsite_grablbs
biz_microsite_grabcontacts biz_microsite_grabcallrds
biz_microsite_grabsms)

for topic in ${array[@]}

do
    #echo $topic
    arr2=$(hadoop fs -ls /datahouse/ods/topic/$topic | awk

'{printf "%s\n", $8}')
    for path in ${arr2[@]}
    do
        newpath=`echo $path | sed 's:/201:/dt=201:'
        hadoop fs -mv $path $newpath
        done

done
```

一般情况下, sed 's/pattern/pattern/flag' 是用/来进行分隔的。但这里的源字符串和替换字符串中,都带有字符/,如果再用/进行分隔,就会产生冲突。所以,改用了:进行分隔。
