hbase 破坏性测试 双master挂掉

环境：cdh6.0.1

一压测工具
HBase2.0中的Benchmark工具 — PerformanceEvaluation

sudo -u hdfs hbase pe randomWrite 1

指定队列
sudo -u hdfs hbase pe -Dmapreduce.job.queuename=root.bf_yarn_pool.development randomWrite 1

执行上面2命令， 然后批量重启datanode，就会导致2个master挂掉

解决办法
重启master 查看日志 查找错误 "org.apache.hadoop.hbase.NotServingRegionException: hbase:meta"

Fri Oct 18 15:31:50 CST 2019, RpcRetryingCaller{globalStartTime=1571383910342, pause=100, maxAttempts=31}, org.apache.hadoop.hbase.NotServingRegionException: org.apache.hadoop.hbase.NotServingRegionException: hbase:namespace,,1565094534570.72042176ee41e7d6ded049b9ed49557d. is not online on bigdata-5.baofoo.cn,16020,1571382648314

在hbase shell 种删除

```
deleteall 'hbase:meta,,1565094534570.72042176ee41e7d6ded049b9ed49557d.','info:regioninfo'
```
