在ansible环境下，控制其他机器，除了/etc/profile文件需要修改，还需要修改/root/.bashrc文件中的值

ansible presto -m copy -a "src=/root/.bashrc dest=/root/.bashrc "

ansible presto -m shell -a "java -version "

ansible presto -m copy -a "src=/opt/presto/etc/catalog dest=/opt/presto/etc/"
ansible presto -m shell -a "ls /opt/presto/etc/catalog "

#增加新的连接

ansible presto -m copy -a "src=/opt/presto/etc/catalog/mysql_80_20.properties dest=/opt/presto/etc/catalog/mysql_80_20.properties"

ansible presto -m shell -a "/opt/presto/bin/launcher restart "
